

FIELDWORK VISIT IN ALGECIRAS

Last 3rdth of June, the Valencia Port Authority (APV) and Technology Institute of the Energy (ITE) visited the Port of Algeciras in order to meet with the Partner APBA about the CLIMEPORT project tasks.

The main goal of the visit was show the results obtained within the Component 3 Current state situation of port according to Green House Gas Emissions from the Port of Valencia and Port of Algeciras, to avoid barriers found in the studies during the data collection and to discuss about the good practices of both ports. After that, representatives of the Port of Valencia and ITE made a “fieldwork” of the public domain areas and port tenants to know all activities developed in the port of Algeciras. During the afternoon session, members of the Valencia Port Foundation subcontracted by APV as administrative and technical coordinator of the projects and Intercontrol subcontracted by APBA as technical company under the component 3 of the project also attended the meetings which focus on the project progress and future actions.
