

Seminar on Energy Efficiency in Valencia

On 17th June of this year, the Autoridad Portuaria de Valencia (Valencia Port Authority) held an event on “Experiences in energy management in port settings” as part of the Climeport project. The aim of this initiative was to present to members of the Port Community the experiences on the subject of Energy Efficiency of the Valencia Port Authority, of different companies involved in the sector and of some technology partners such as the *Instituto Tecnológico de Energía* (ITE, the Energy Technological Institute) and the *Agencia Valenciana de la Energía* (AVEN, the Valencian Energy Agency).

Apart from presenting the Climeport project, its expected results and the tasks being carried out to the almost 70 attendees at the event, the objective was to raise awareness amongst the companies that constitute the port community of the need to adopt energy-saving policies to improve their competitiveness and to contribute to a reduction in the total emissions produced by port activities. In an effort to achieve this raised awareness of contributing to a reduction in energy consumption, those attendees who came with an incandescent light bulb were given an energy-efficient light bulb in exchange.
