

- EGÉTICA-EXPOENERGÉTICA -Technical Workshops at Feria Valencia (Valencia Trade Fair)-

DEVELOPMENT AND SUSTAINABILITY, THE PRINCIPAL FOUNDATIONS BEHIND THE CLIMEPORT PROJECT

Within the EGÉTICA / EXPOENERGÉTICA technical workshops – International Energy Trade Fair, that are held within the context of the Environment and Energy Trade Fair in Valencia, this year on February 17th and 18th, the *European Energy Efficiency and Renewable Energies Projects Workshop* was held, with presentations of some of the major environmental projects being developed today.

Within this framework, Rafael Company, Head of R&D Projects at Valencia Port, presented the CLIMEPORT Project in conjunction with Pedro Mayorga from the *Instituto Tecnológico de la Energía* (ITE) [Energy Technology Institute].

The final stage of the project will be the implementation of three pilot tests at six ports which will provide us with exact information about the total saving and applicability to other ports even outside the European continent.

The *European Energy Efficiency and Renewable Energies Projects Workshop* held at EGÉTICA / EXPOENERGÉTICA was part of the workshop organised by the *Fundación Comunidad Valenciana Región Europea* (Valencian Community European Region Foundation) under the title of EUROPEAN ENERGY PROJECTS. The event was chaired by Marta Esteve from the Valencian Community Foundation. Other initiatives were also presented such as the MORE4NRG Project by Joaquín Ortolá (Valencian Energy Agency), the BioEnergy & Fire Prevention Project –Life+, by Fernando Pradells (Valencian Community Forestry Township Association); and the PMO Project which was presented by Fina Gonell (Intercoop Group).

The International Trade Fair for the Efficient Management of Water – EFIAQUA, and the International Trade Fair for Environmental Solutions –ECOFIRA-, completed the triple commercial offer at Valencia Trade Fair targeting professionals in environmental management.
